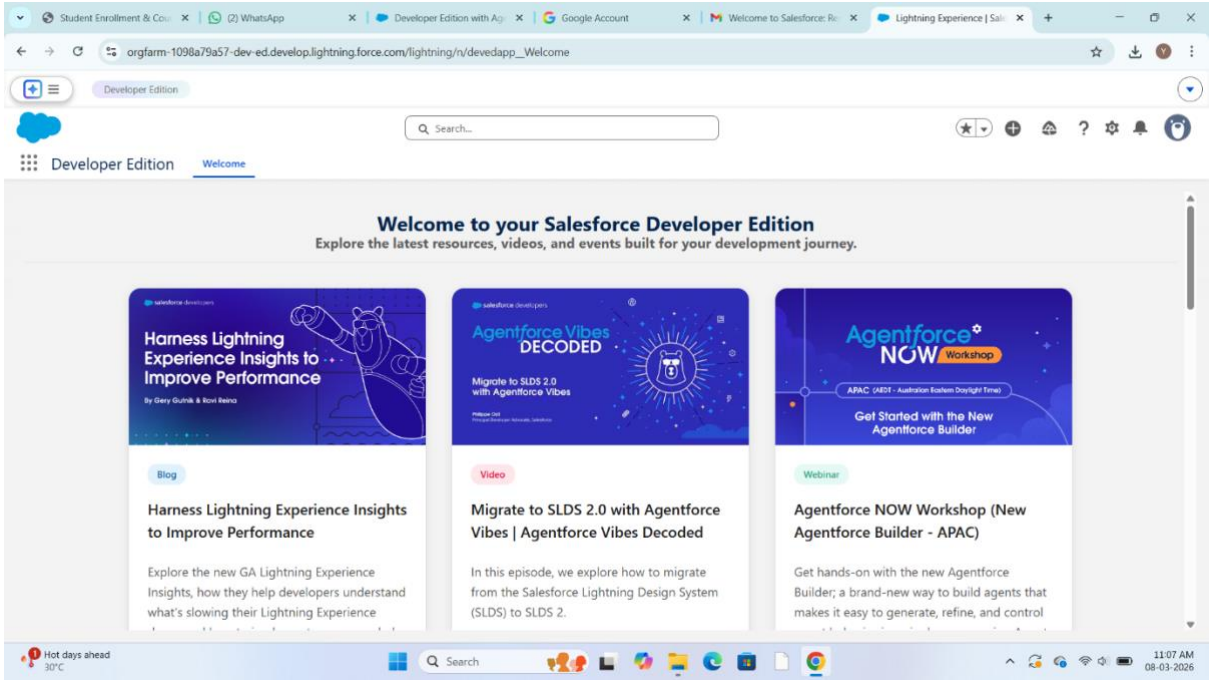
ABSTRACT:

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application designed to automate and simplify the academic enrollment process within educational institutions. Traditional enrollment systems often rely on manual data entry, spreadsheets, and disconnected tools, which can lead to errors, delays, and inefficient data management. This project aims to develop a centralized and automated system that efficiently manages student information, course offerings, enrollments, instructor assignments, and approval workflows. The system allows administrators and enrollment officers to easily register students, manage course details, process enrollment requests, and track academic activities through a single platform. By using Salesforce custom objects, relationships, validation rules, flows, approval processes, reports, and dashboards, the application ensures structured workflows, accurate data handling, and real-time visibility of academic operations. Automation features such as record-triggered flows, automatic instructor assignment, enrollment validation, and approval notifications help reduce manual effort and improve operational efficiency. The system also provides analytical insights through reports and dashboards, enabling administrators to monitor student enrollments, course performance, and revenue generation. Overall, the SECMS enhances data accuracy, improves transparency in enrollment management, and supports better decision-making for educational institutions. The project demonstrates how Salesforce technology can transform traditional academic administration into a scalable, reliable, and user-friendly digital solution.

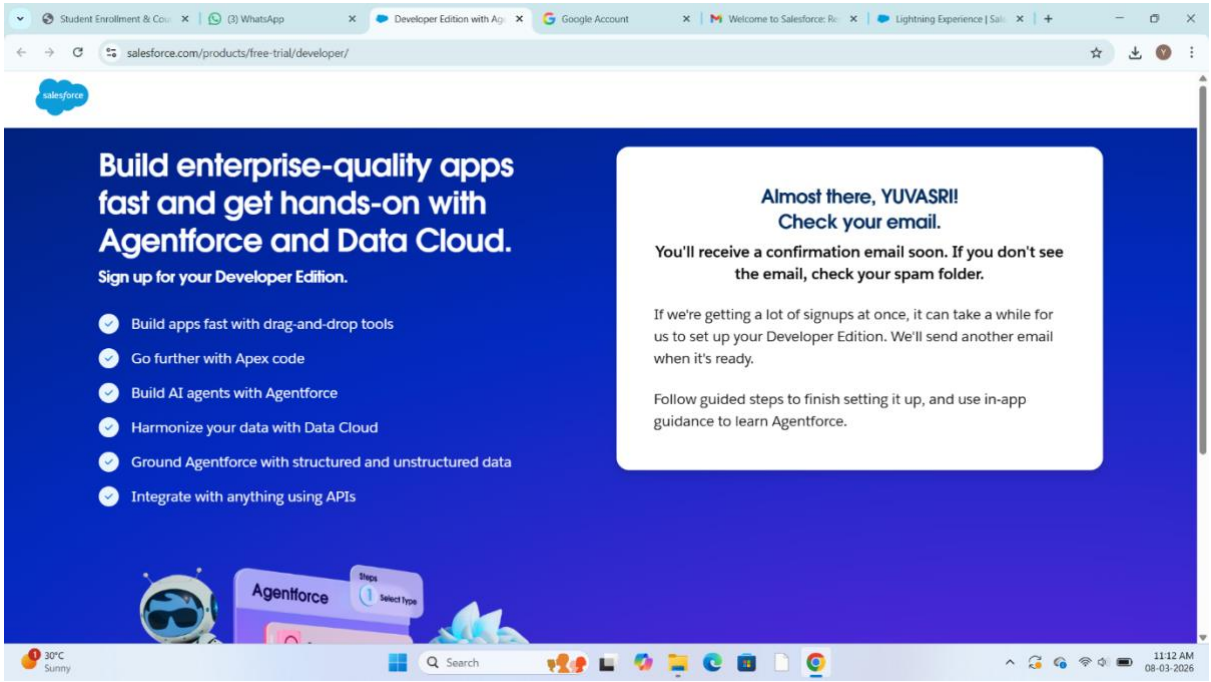
INTRODUCTION

This project aims to centralize all student, course, and enrollment-related data within a single Salesforce application to ensure easy data access, structured workflows, and accurate reporting. The system allows Enrollment Officers to manage student admissions, course registrations, and communication effectively, while instructors and administrators gain full transparency into course allocations and academic progress. The solution also enables automated instructor assignment, task creation, validation checks, and multi-level approval processes for enrollment management. With Salesforce Flows, Approval Processes, Validation Rules, Reports, and Dashboards, the organization can ensure that all enrollment operations—from admission to course completion—are handled systematically and with continuous monitoring of key performance indicators such as enrollment volume, revenue, student status distribution, and pending approvals. The system enables administrators and enrollment officers to maintain detailed records of students, courses, instructors, and enrollment activities. It also provides automated workflows that simplify the process of approving enrollment requests and assigning instructors to courses. Through Salesforce features such as custom objects, validation rules, approval processes, and automation flows, the system ensures accurate data entry and smooth operational workflows. Additionally, the application provides reports and dashboards that allow administrators to analyze enrollment statistics, monitor course demand, and track academic performance. These insights support better decision-making and improve overall institutional management. Overall, the SECMS project demonstrates how Salesforce technology can be used to develop a scalable, secure, and user-friendly system that enhances the efficiency

Milestone 1-Salesforce:

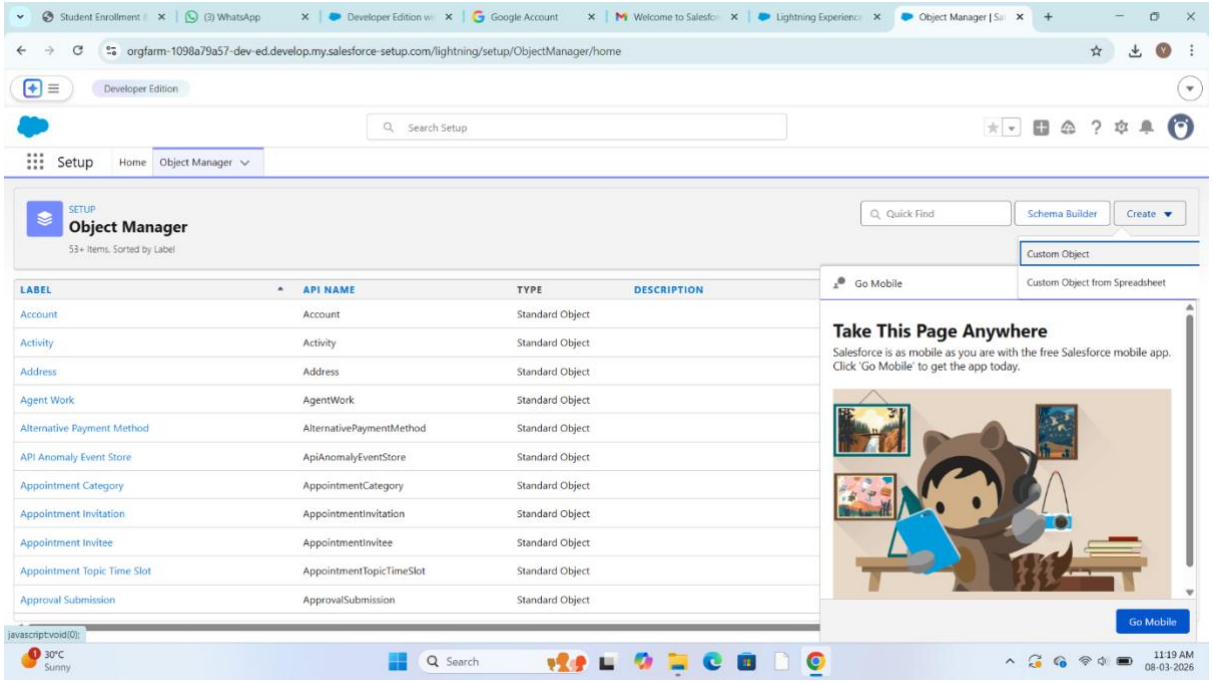


Activity 2:

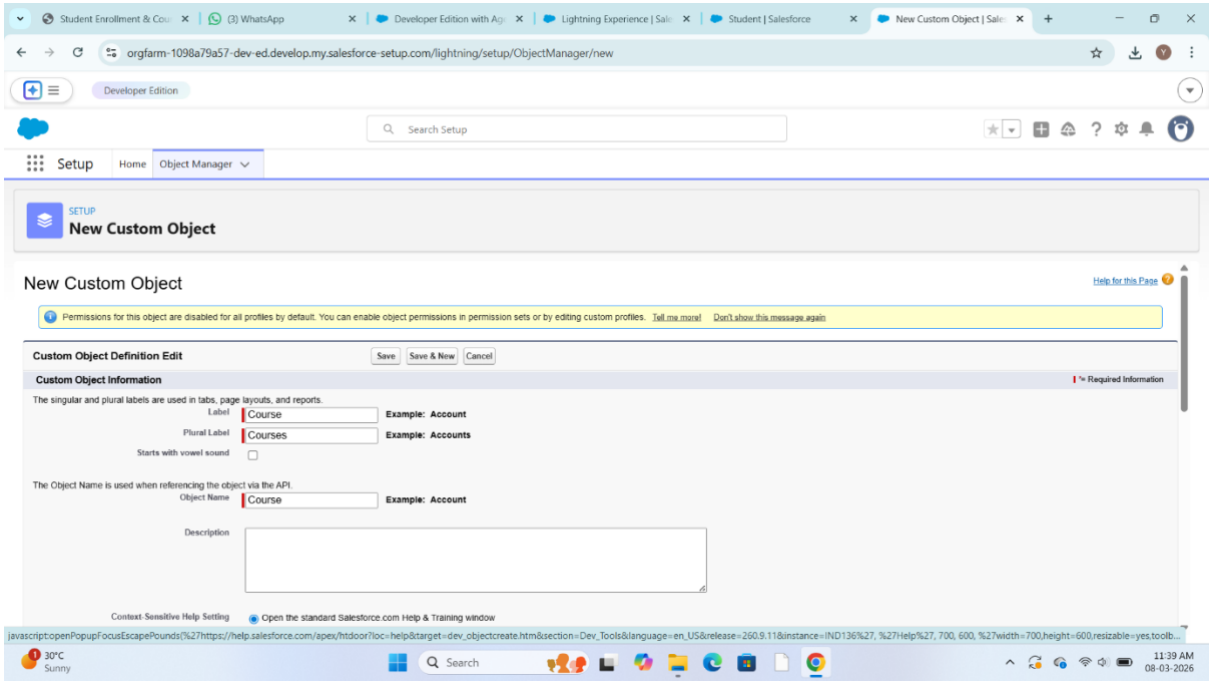


Milestone 2

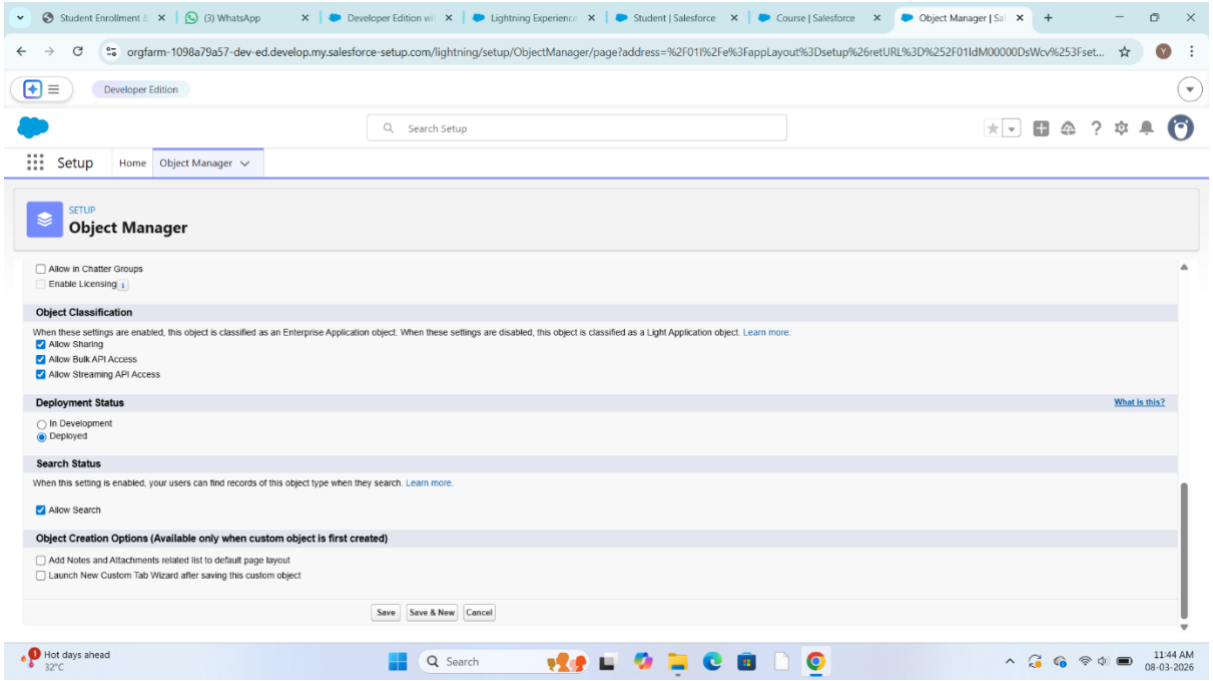
Objects: Activity 1: Creating Student Object:



Activity 2:

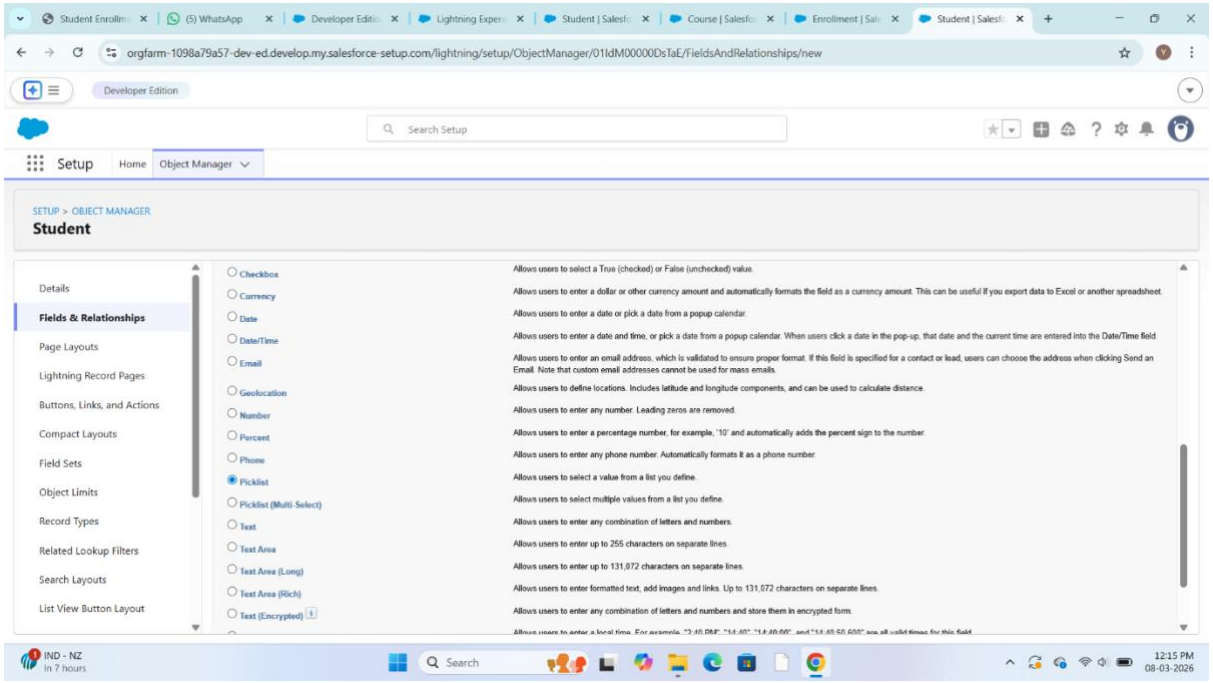


Milestone 3 - Fields:



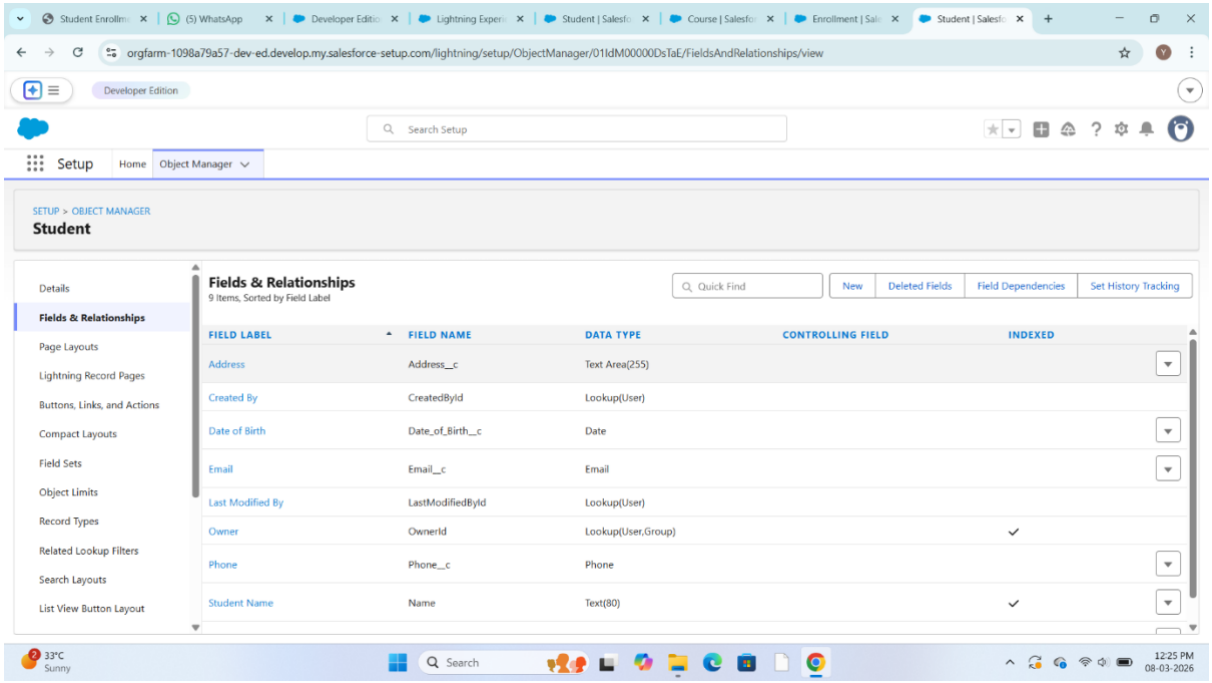
Milestone 4

Create Relationships:



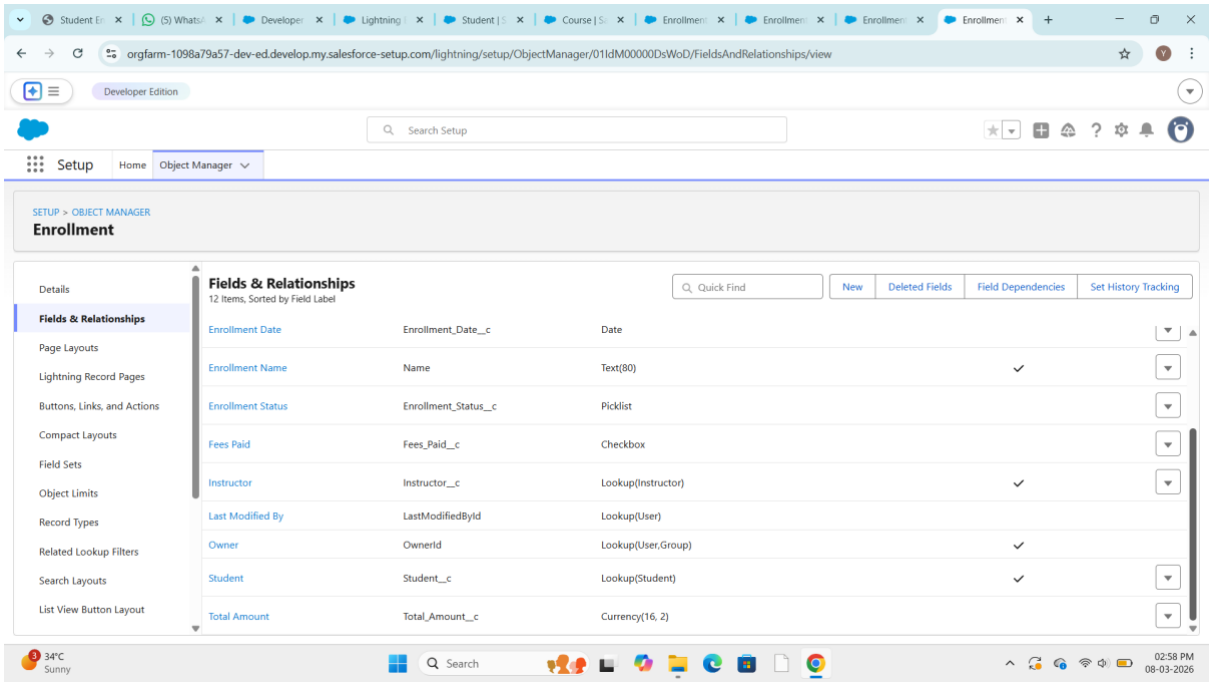
Activity 2:

Create Lookup from Enrollment to Course



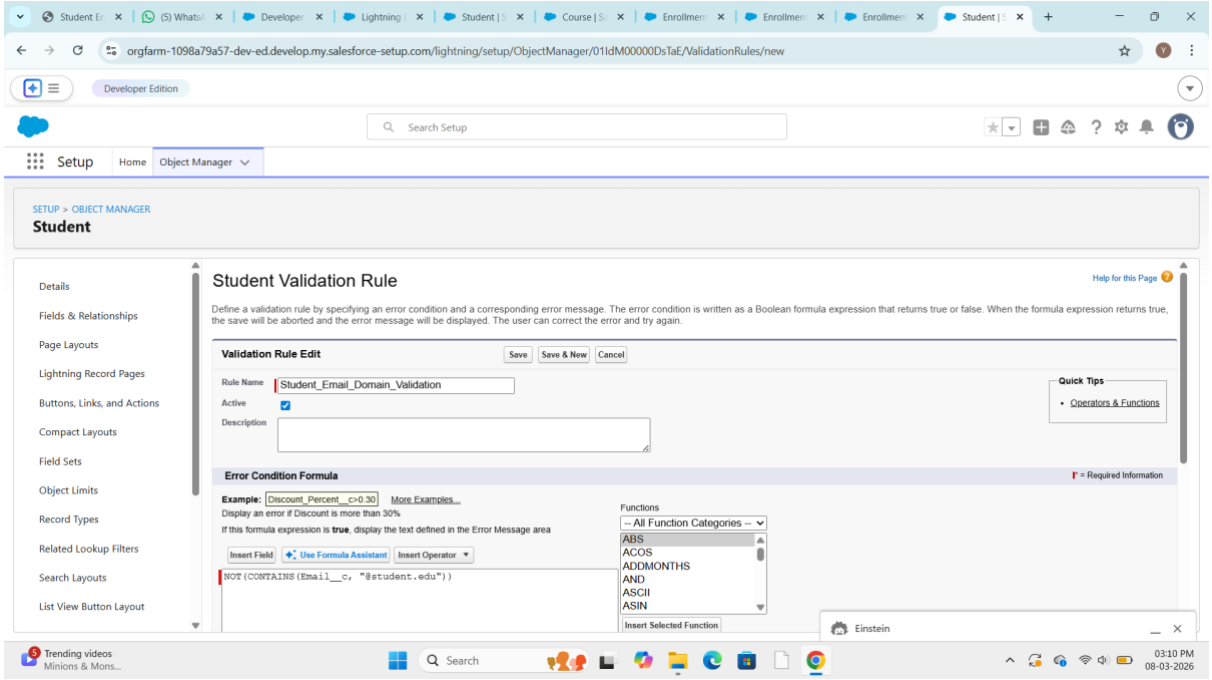
Activity 3:

Create Lookup from Enrollment to Instructor:



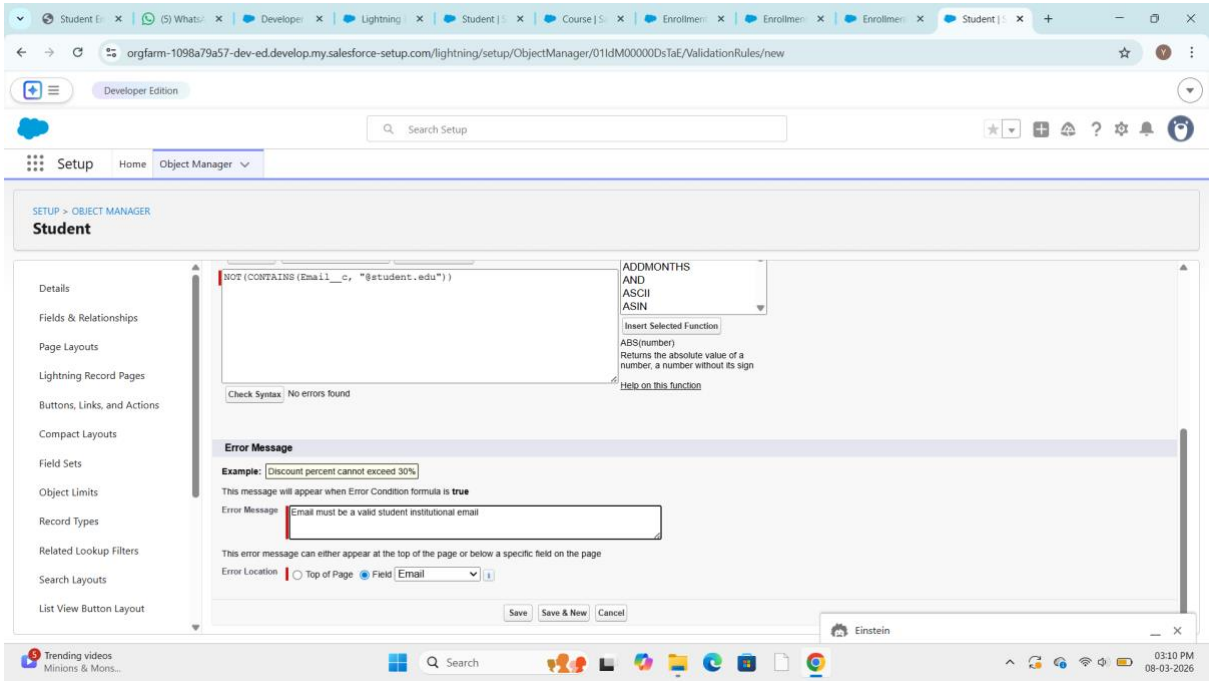
Milestone 5

Validation Rules:



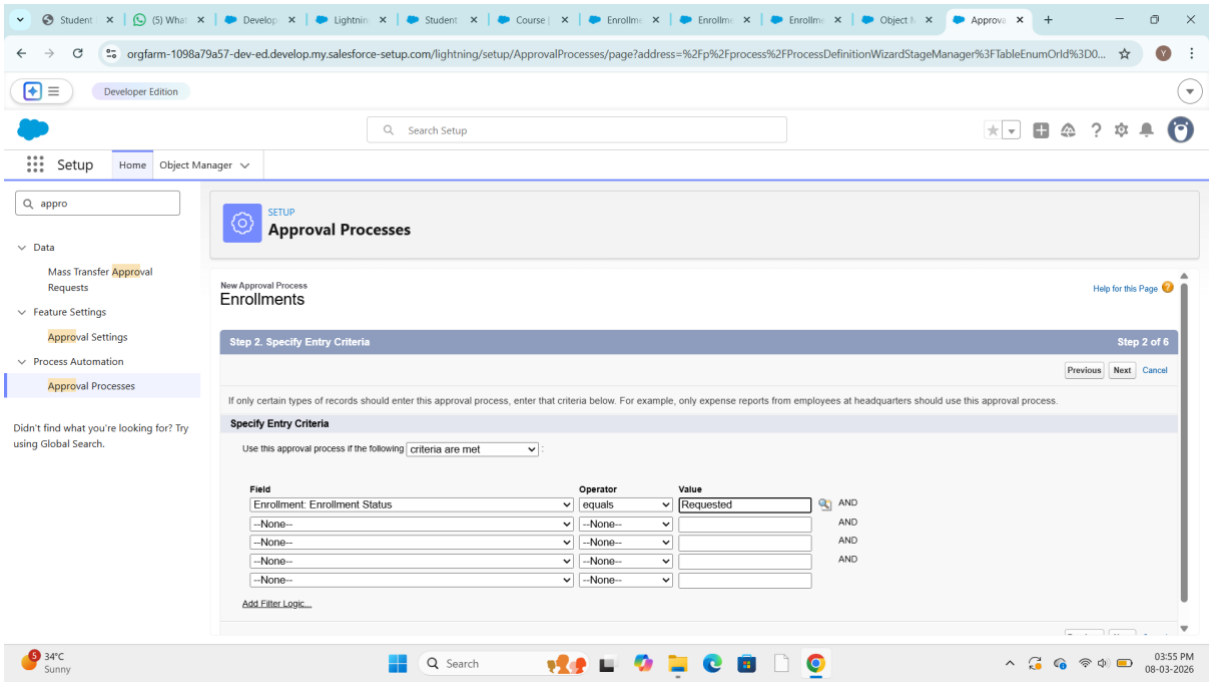
Activity 2:

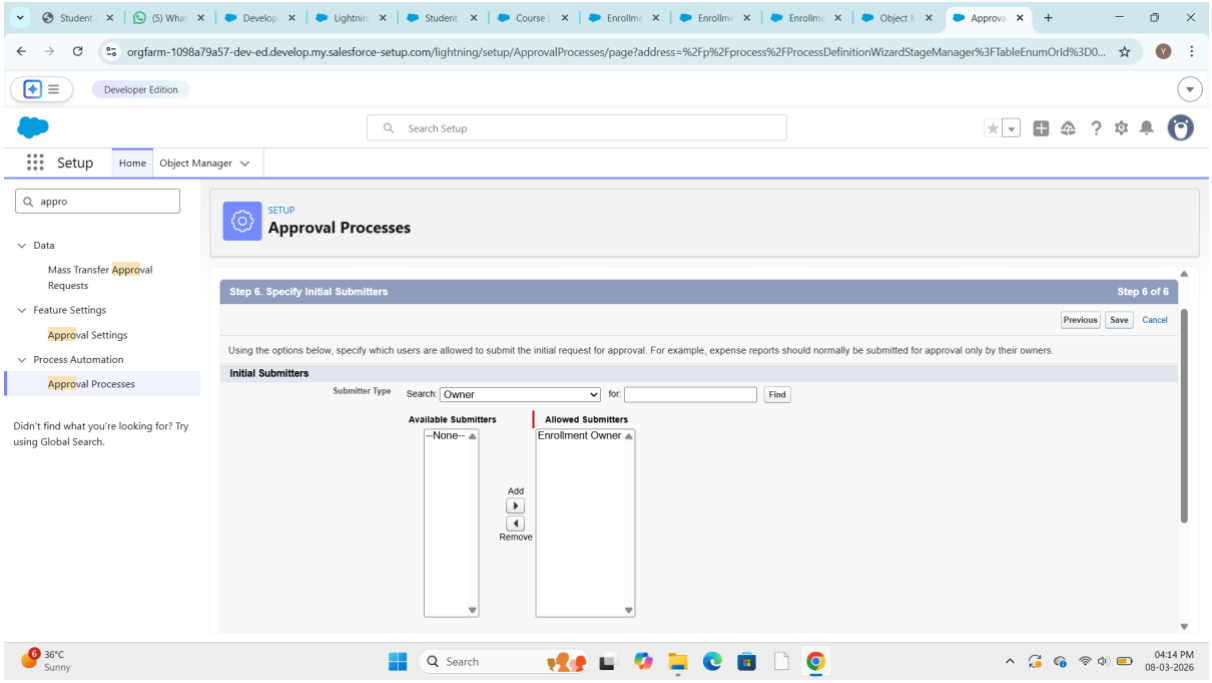
Fees Must Be Paid Before Approval

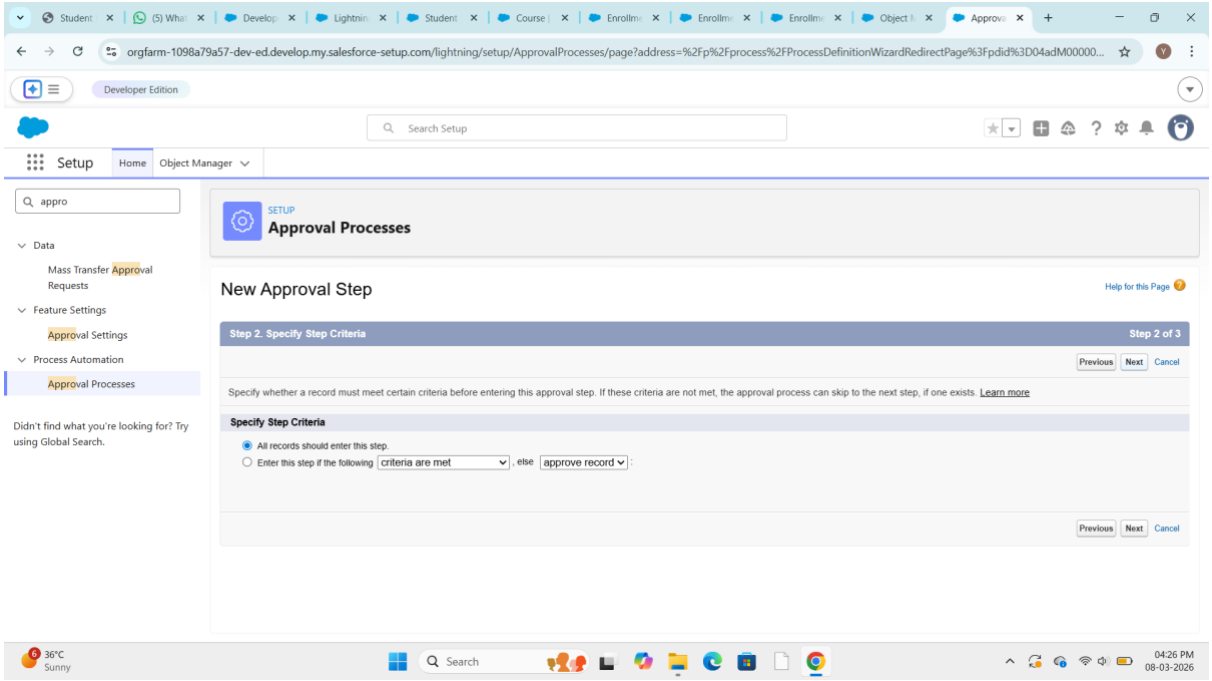


Milestone 6 – Approval Process

Activity 1: Create Approval Process for Enrollment Requests

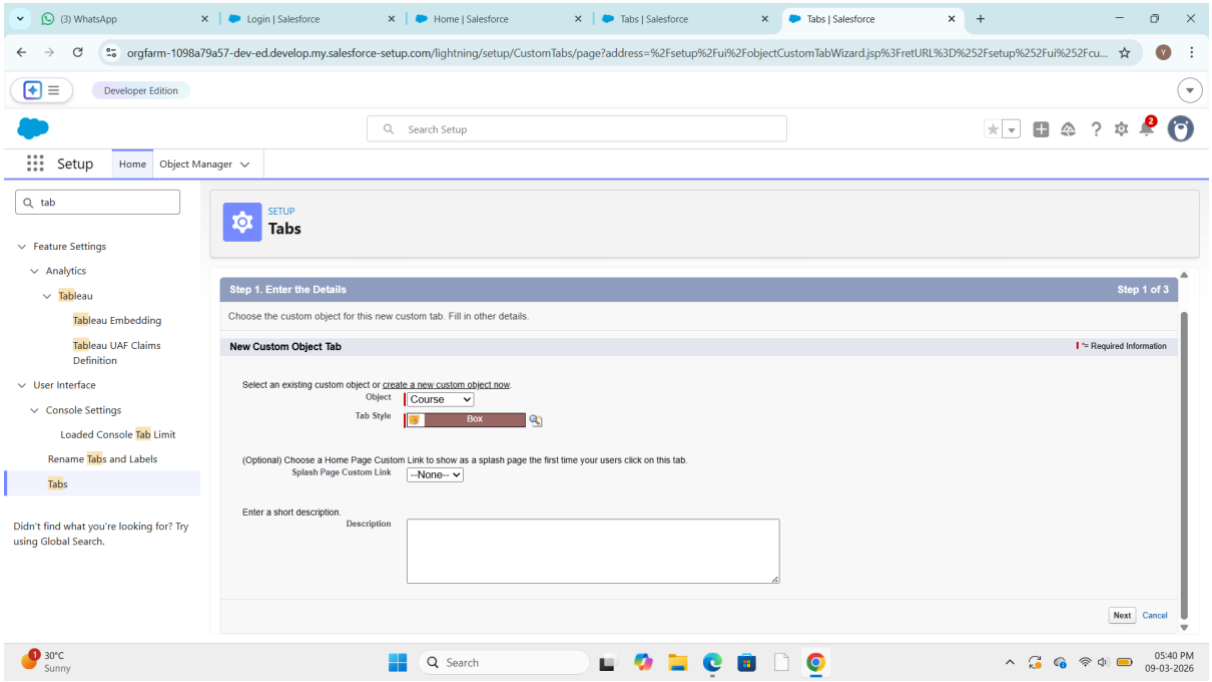






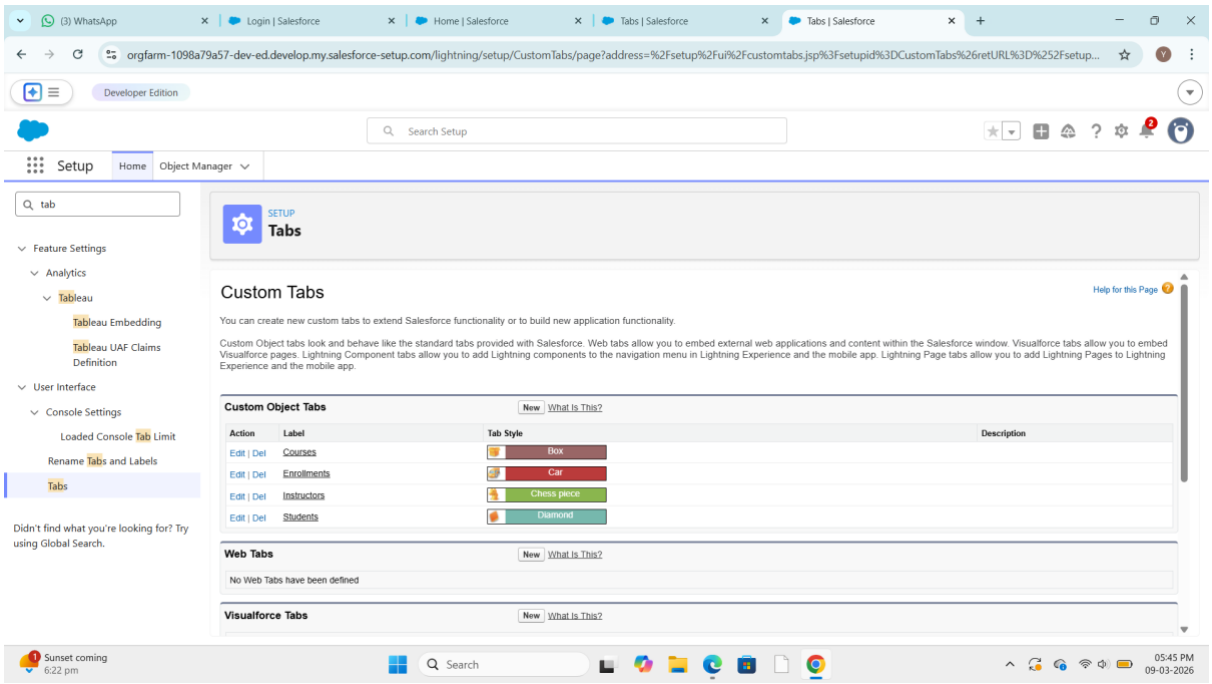
Milestone 7- Tabs

Activity 1: Creating a Tab for the Student Object:



Activity 2:

Creating Remaining Tabs Now create the Tabs for the remaining Objects, they are “Courses, Instructors, Enrollment”. Follow the same steps as mentioned in Activity -1



Milestone 8 - The Lightning App

Activity 1: Creating the Lightning Application for the Project

New Lightning App
Navigation Items
Choose the items to include in the app, and arrange the order in which they appear. Users can personalize the navigation to add or move items, but users can't remove or rename the items that you add. Some navigation items are available only for phone or only for desktop. These items are dropped from the navigation bar when the app is viewed in a format that the item doesn't support.

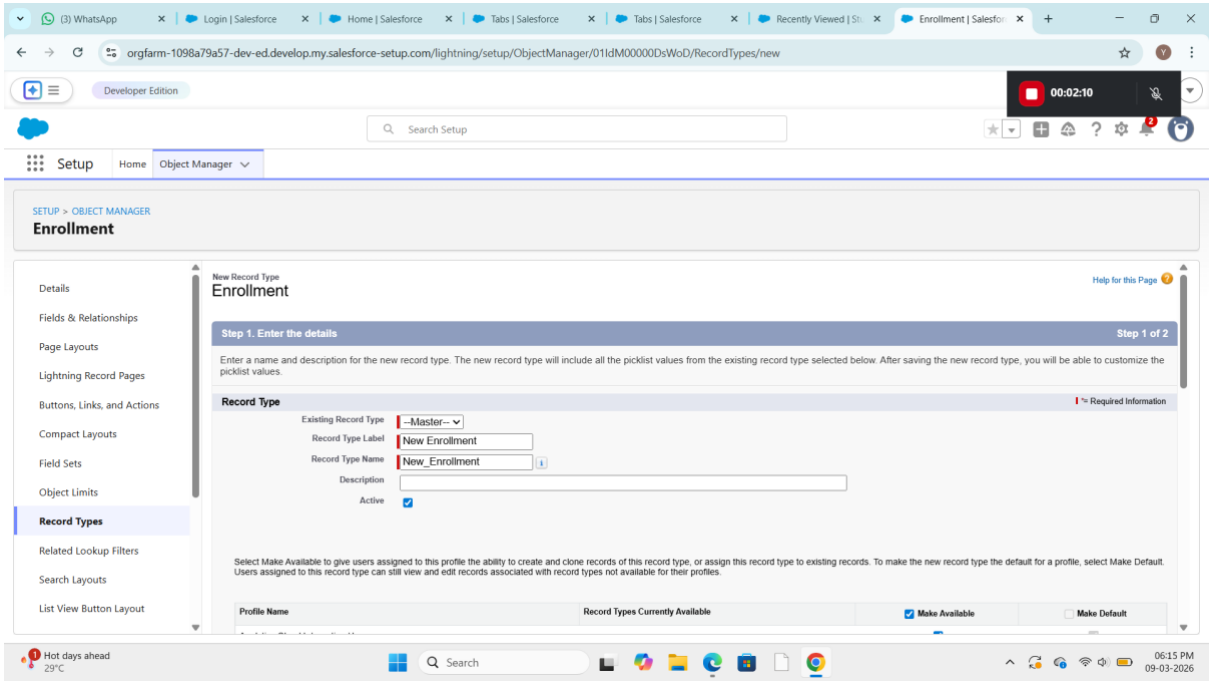
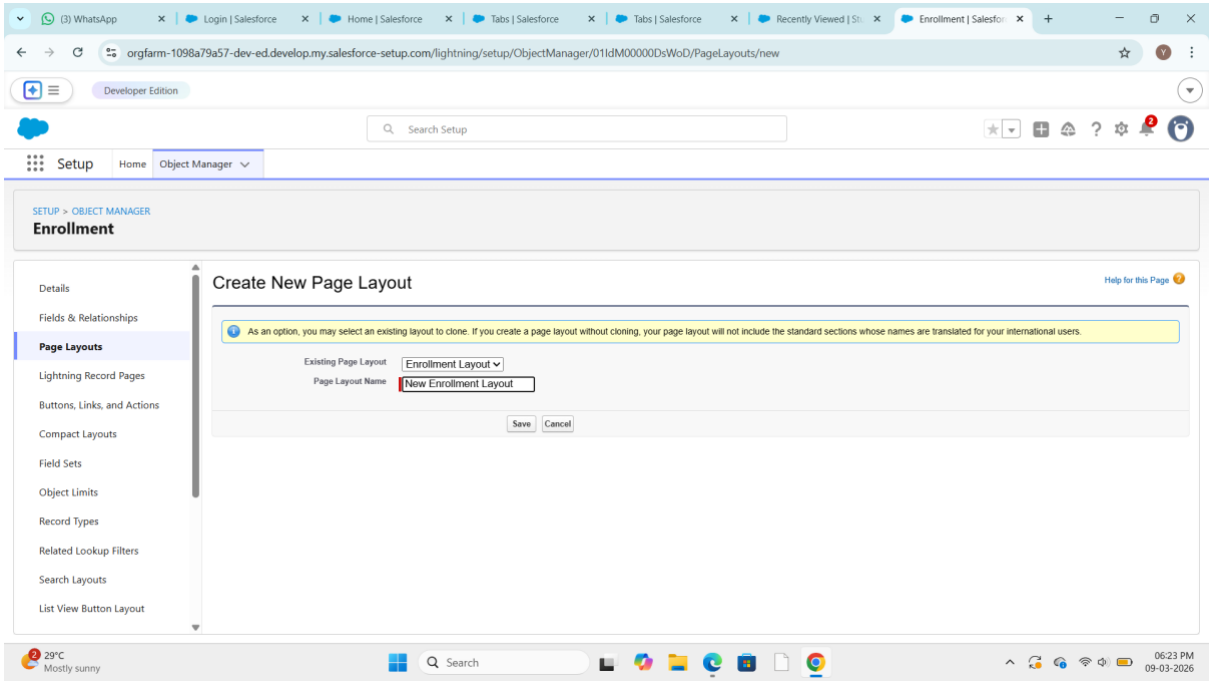
Milestone 9 – Page Layouts and Record:

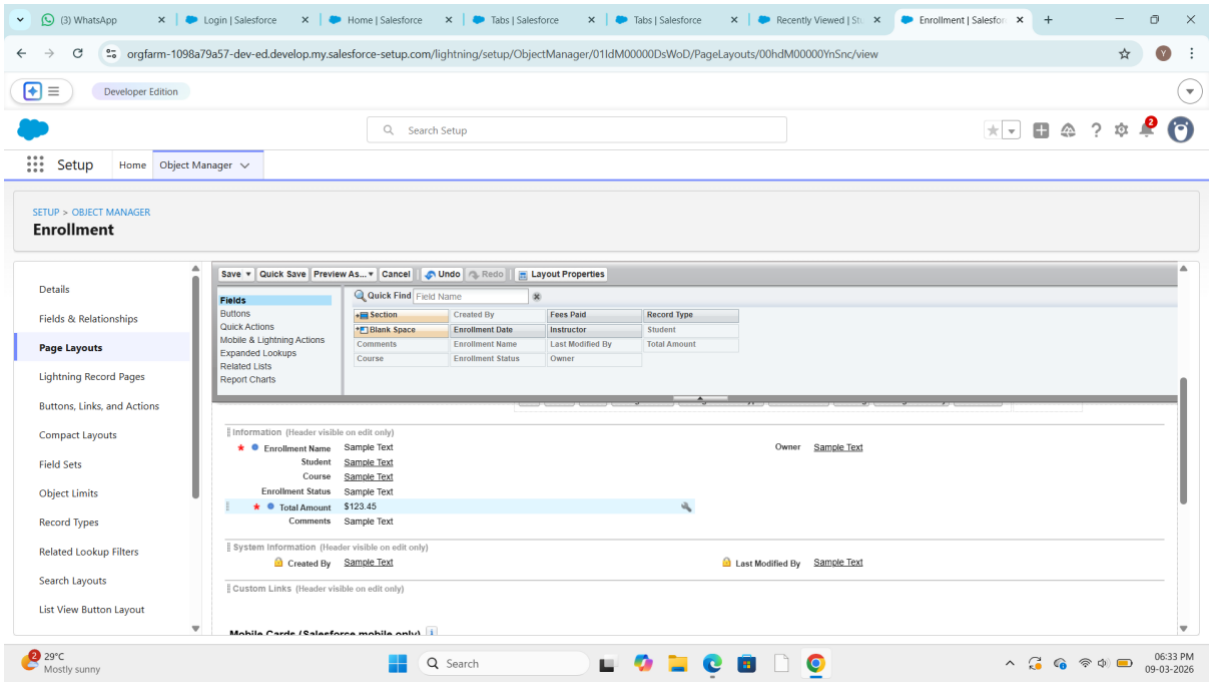
Activity 1: Create Record Types for Enrollment:



Activity 2:

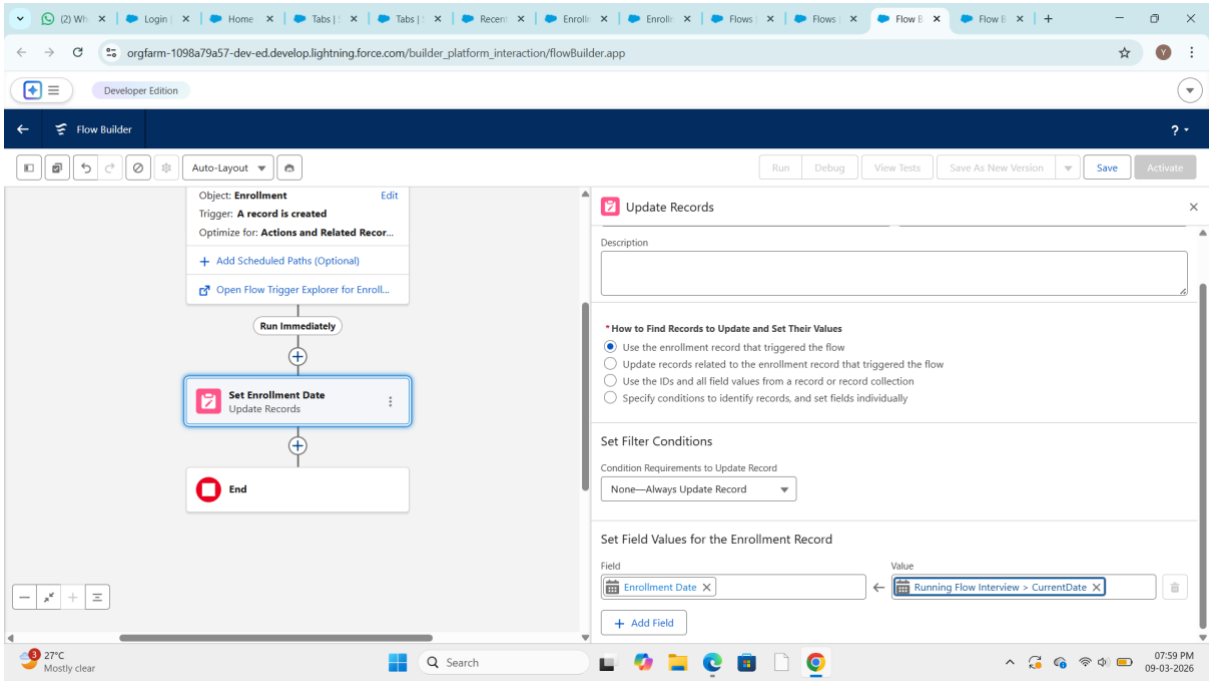
Separate Page Layo Create for Each Enrollment Record Type



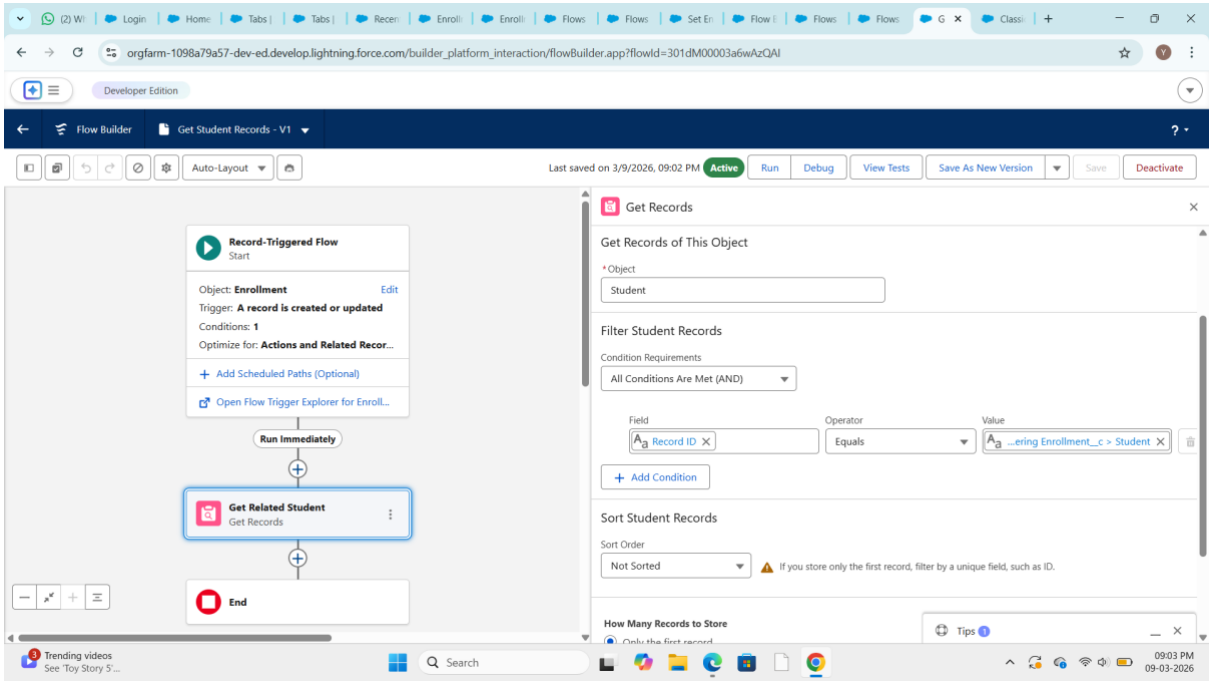


Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow)

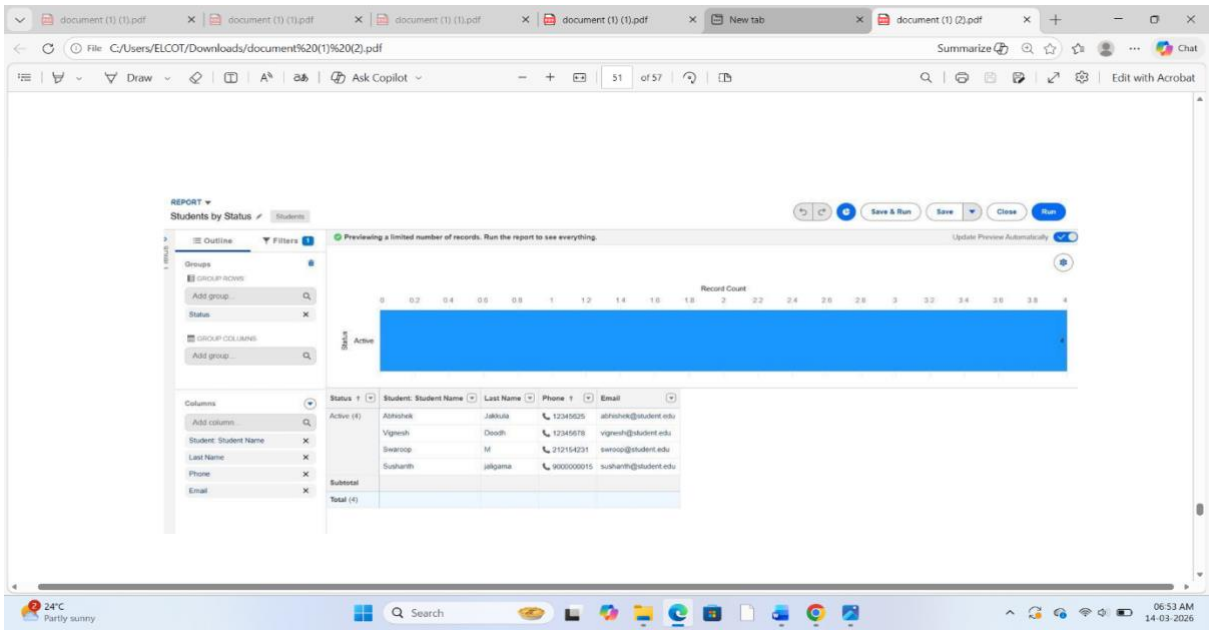


Activity 2: Send Email When Enrollment Approved

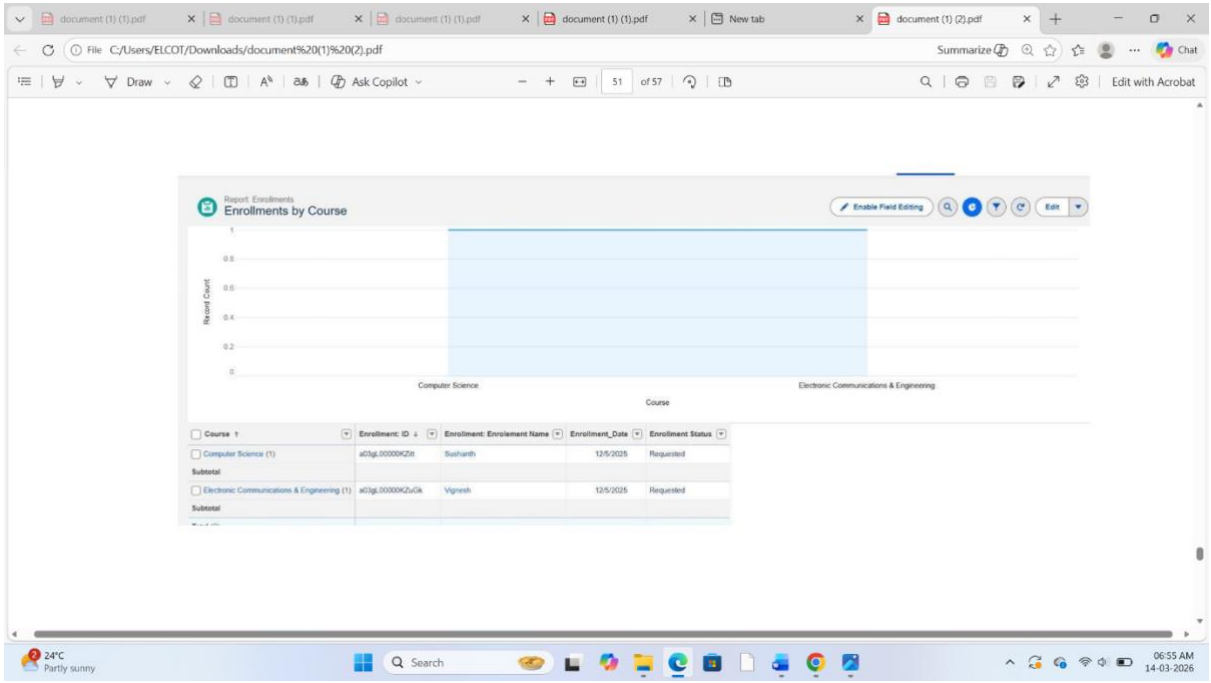


Milestone 11 – Reports:

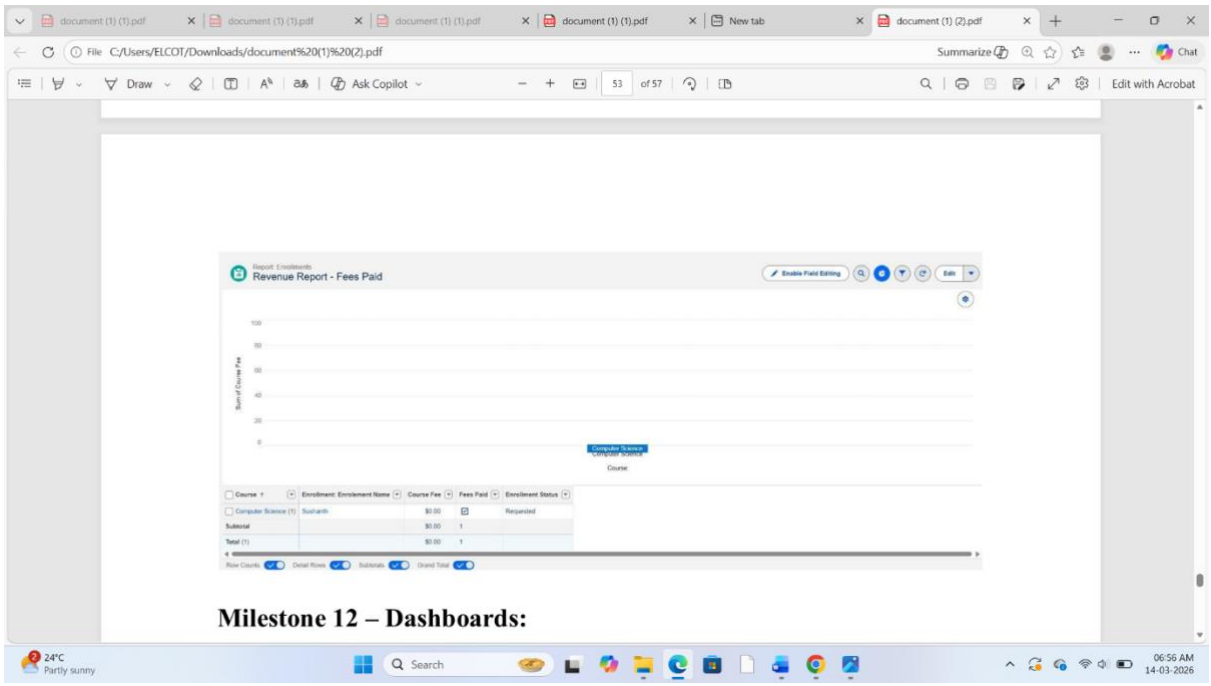
Activity 1: Create “Students by Status” Report



Activity 2: Create “Enrollments by Course” Report



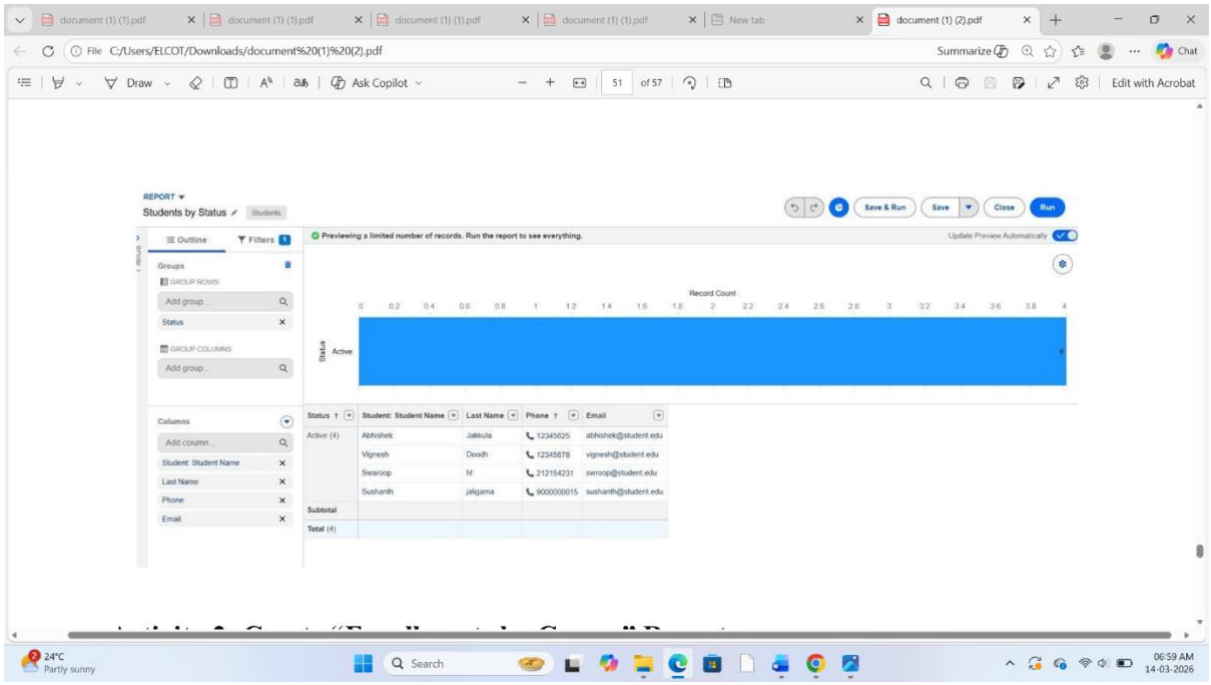
Activity 4: Create “Revenue Report (Fees Paid)” Report



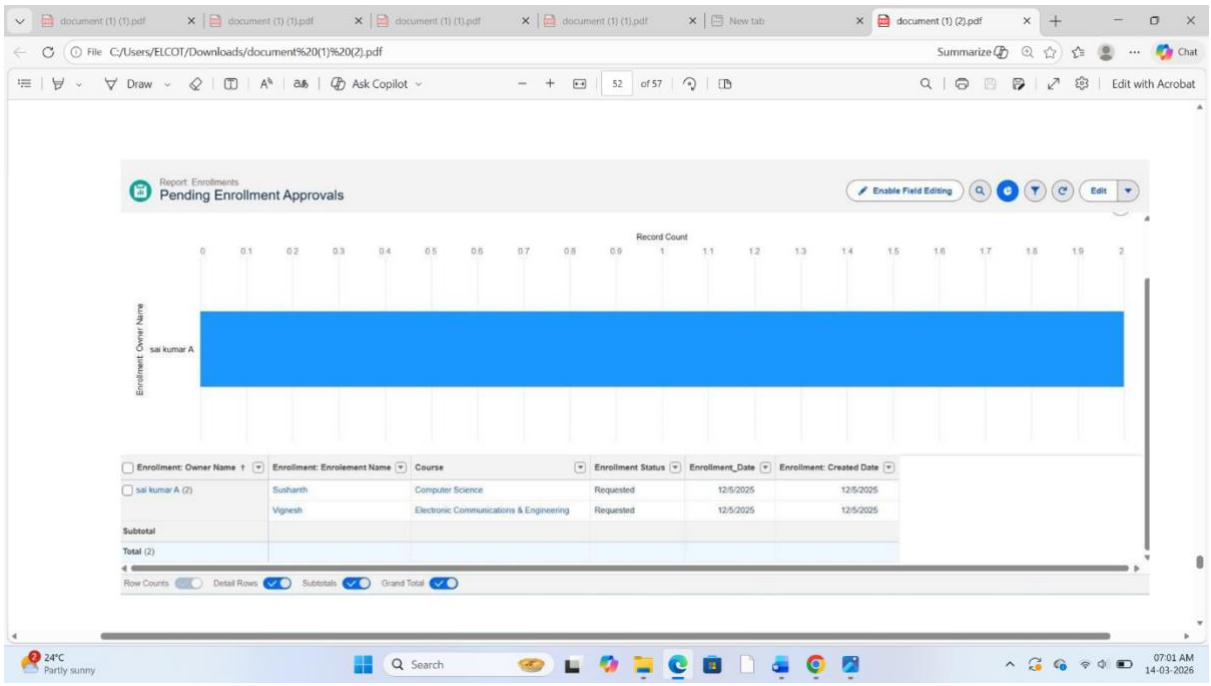
Milestone 12 – Dashboards:

Activity1:Create “Student Management Dashboard”

Steps:



Activity 2: Create “Enrollments by Course” Report



Milestone 13 – Security Setup

Activity 1: Configure Profiles

Activity 2: Create Permission Sets

Activity 3: Configure Sharing & OWD Steps:
